FlexiAirmatTM

From C&J Marine Ltd

Are you fed up with feeling damp in the mornings and having to dry your mattresses because moisture has formed underneath...

www.flexiairmat.co.uk

...this could now be a thing of the past by fitting the revolutionary **FLEXI AIR MAT** from **C&J Marine Ltd.**

What makes our air mat so special?

Well unlike other matting on the market the Matting supplied by C&J Marine has an unique benefit built into the fabric which is Ag+. This treatment is a natural silver bacterial killer which helps reduce the build up of bacteria for example MRSA, Salmonella and E-Coli to name a few and many others, this treatment also inhibits mildew growth on the matting itself. The silver treatment while inhibiting the growth of bacteria still retains an effective hygienic odour control. This treatment is widely used in the health care industry and has shown to reduce bacteria growth by 99.9% compared to non treated fabrics.

The FLEXI AIR MAT supplied by C&J Marine is we believe without a doubt the best product for this application on the market at this time, even after many washes the fabric is still has in excess of 95% reduction in bacteria growth compared to non treated fabrics.

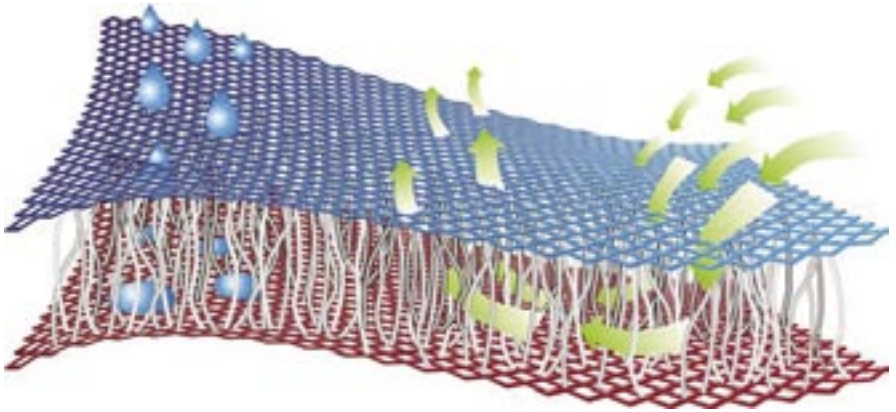

WHAT IS FLEXI AIR MAT?

The FLEXI AIR MAT is specifically designed to reduce build up of condensation and mildew growth under seating and mattress applications, the 3 dimensional spacer fabric allows the air to circulate beneath the cushions therefore reducing the build up of moisture which may in turn reduce the effects of condensation. The FLEXI AIR MAT is manufactured in the UK under strict environmental conditions and has been screened for harmful substances, it is 100% polyester, washable and totally recyclable, which is another reason to choose the FLEXI AIR MAT from C&J Marine Ltd.

FlexiAirmatTM

The FLEXI AIR MAT is 2.1 metres wide and available for as little as 1 metre 'off the roll'. This enables you to purchase as much or as little as required. The fabric is easily cut using household scissors; no need to purchase special tools! FLEXI AIR MAT is 8mm thick, which we believe to be the optimum density for this type of application. Some thicker spacer fabrics can be a nuisance by lifting cushions out of place causing problems with the 'fit'. Although the matting is only 8mm thick, it has been developed to with stand over 2 tonnes per m2 before collapse. FLEXI AIR MAT conforms to the British Standard for flame retardancy EN1021-1:1994; and is manufactured under quality assurance ISO 9001 and ISO 14001. The fabric has also been OekoTex approved to an international testing and certification system for textiles. OekoTex is widely accepted as a bench mark standard throughout the textiles industry.

So just to summarise the benefits of choosing FLEXI AIR MAT from C&J Marine Ltd.

- ❑ Reduction in condensation
- ❑ Increased air flow which increases mattress life
- ❑ Ag+ silver treatment helps to reduce mildew and bacterial growth and has an effective odour control
- ❑ Flexi air mat withstands over 2 tonnes per m2 before collapse
- ❑ Optimal 8mm thickness
- ❑ Flame retardant to British Standards
- ❑ Machine washable
- ❑ Easily cut to fit all applications
- ❑ Recyclable
- ❑ Approved and manufactured under stringent testing conditions
