

THREAD

WARRANTY - 12 MONTHS

ANTI-WICK FINISH

Serabond is an anti-wick polyester thread. This finish helps the thread repel water. It prevents “weeping” seams and is resistant to mildew. It’s also resistant to salt water damage.

WEATHER RESISTANT

Hohenstein Laboratories have examined Serabond's durability with a weathering test: Through modern processing technologies and the usage of special dyestuffs, both maximum tensile force and colour fastness remain on a high level, even after 300 hours of testing.

RESISTANT TO UV

Polyester is known for its strength, durability, and low shrinkage and stretch. It is the most common thread for outdoor applications. Over nylon threads, polyester thread has superior resistance to UV rays and moisture but much of its strength is lost after prolonged exposure to sunlight.

WARRANTY – 15 YEARS
Tenara® ePTFE thread comes with a warranty of 15 years against UV degradation

INVULNERABLE TO UV
GORE® TENARA® sewing thread maintains its strength even after regular exposure to UV sunlight and constant outdoor use.

WATER & WEATHER PROOF
GORE® TENARA® Sewing Thread remains flexible even in extremes of temperature or frost. It gives outdoor fabric products the kind of strength that withstands severe weather conditions – even after years of exposure.

COLOUR STRENGTH
We only use pigments which are highly resistant to light. Due to the manufacturing process and the exceptional properties of ePTFE, GORE® TENARA® sewing threads are extremely colour-fast.

RESISTANT TO CHEMICALS
GORE® TENARA® Sewing Thread is unaffected by acids, alkaline solutions, bleach and cleaning chemicals
