

POLYESTER CANVAS

MARINE SUITABILITY

WeatherMax is made from the SaturaMax yarn. This is a solid pigment, solution dyed polymer yarn. It is highly breathable but yet still water resistant. It offers superior colour consistency, light fastness and strength characteristics. Its fade resistance is equal to that of acrylic fabrics.

ABRASION RESISTANCE

WeatherMax is a light weight polyester based fabric, therefore has a strong abrasion resistance. It has twice the strength of acrylic and is six times more durable under abrasion and rubbing..

WEATHER RESISTANT

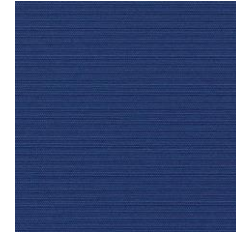

HydroMax is a highly water repellent impregnated finish that helps give WeatherMax the ability to protect against heavy rain while keeping its breathability and dimensional stability. The finish is also highly resistant to dirt and staining. An anti-microbial component is also added to the finish to help prevent any potential mildew or mould growth on top of the fabric.

WARRANTY – 5 YEARS

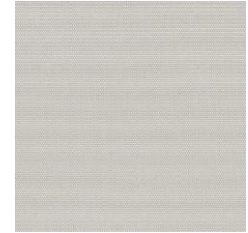

The warranty covers only the fabric being unserviceable because of loss of strength and/or colour from natural conditions of exposure. That includes sunlight, mildew and atmospheric chemicals.
